

Assignment No.	1
Name	Anusha.S
Registration No.	SSNCE195001019
Team No.	PNT2022TMID53036

### Question-1:

Create registration page in html with username, email, and phone number and by using POST method display it in next html page.

### index.html

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-
scale=1">
    <title>Registration</title>
    <link rel="stylesheet" href="{{
url_for('static',filename='styles/index.css') }}">
  </head>
  <body>
    <center>
      <br><br>
      <h1>Registration</h1><br>
      <form action="{{ url_for('result') }}" method="post">
        <table>
          <tr>
            <td>
              <label>Name</label>
            </td>
            <td>
              : <input type="text" class="name-input
name mb-3" id="name" name="name">
            </td>
          </tr>
          <tr>
            <td>
              <label>Email</label>
            </td>
            <td>
              : <input type="email" class="name-
input name mb-3" id="email" name="email">
            </td>
          </tr>
        </table>
      </form>
    </center>
  </body>
</html>
```

```

        </tr>
        <tr>
            <td>
                <label>Mobile</label>
            </td>
            <td>
                : <input type="number" class="name-
input name mb-3" id="mobile" name="mobile">
            </td>
        </tr>
    </table>
    <br><br>
    <input class="btn btn-outline-primary" type="submit"
value="Submit">
    </form>
    </center>
</body>
</html>

```

### **result.html**

```

<!DOCTYPE html>
<html>
    <head>
        <meta charset="utf-8">
        <meta name="viewport" content="width=device-width, initial-
scale=1">
        <title>Profile</title>
        <link rel="stylesheet" href="{{
url_for('static',filename='styles/index.css') }}">
    </head>
    <body>
        <center>
            <br><br>
            <h1>Welcome !!!</h1>
            <br>
            <form action="{{ url_for('result') }}" method="post">
                <table>
                    <tr>
                        <h3>Name : {{ name }}<br></h3>
                    </tr>
                    <tr>
                        <h3>Email : {{ email }}<br></h3>
                    </tr>
                    <tr>

```

```

                <h3>Mobile : {{ mobile }}<br></h3>
            </tr>
        </table>
        <br><br>
    </form>
</center>
</body>
</html>

```

### **app.py**

```

from flask import *;
import os

app = Flask(__name__)

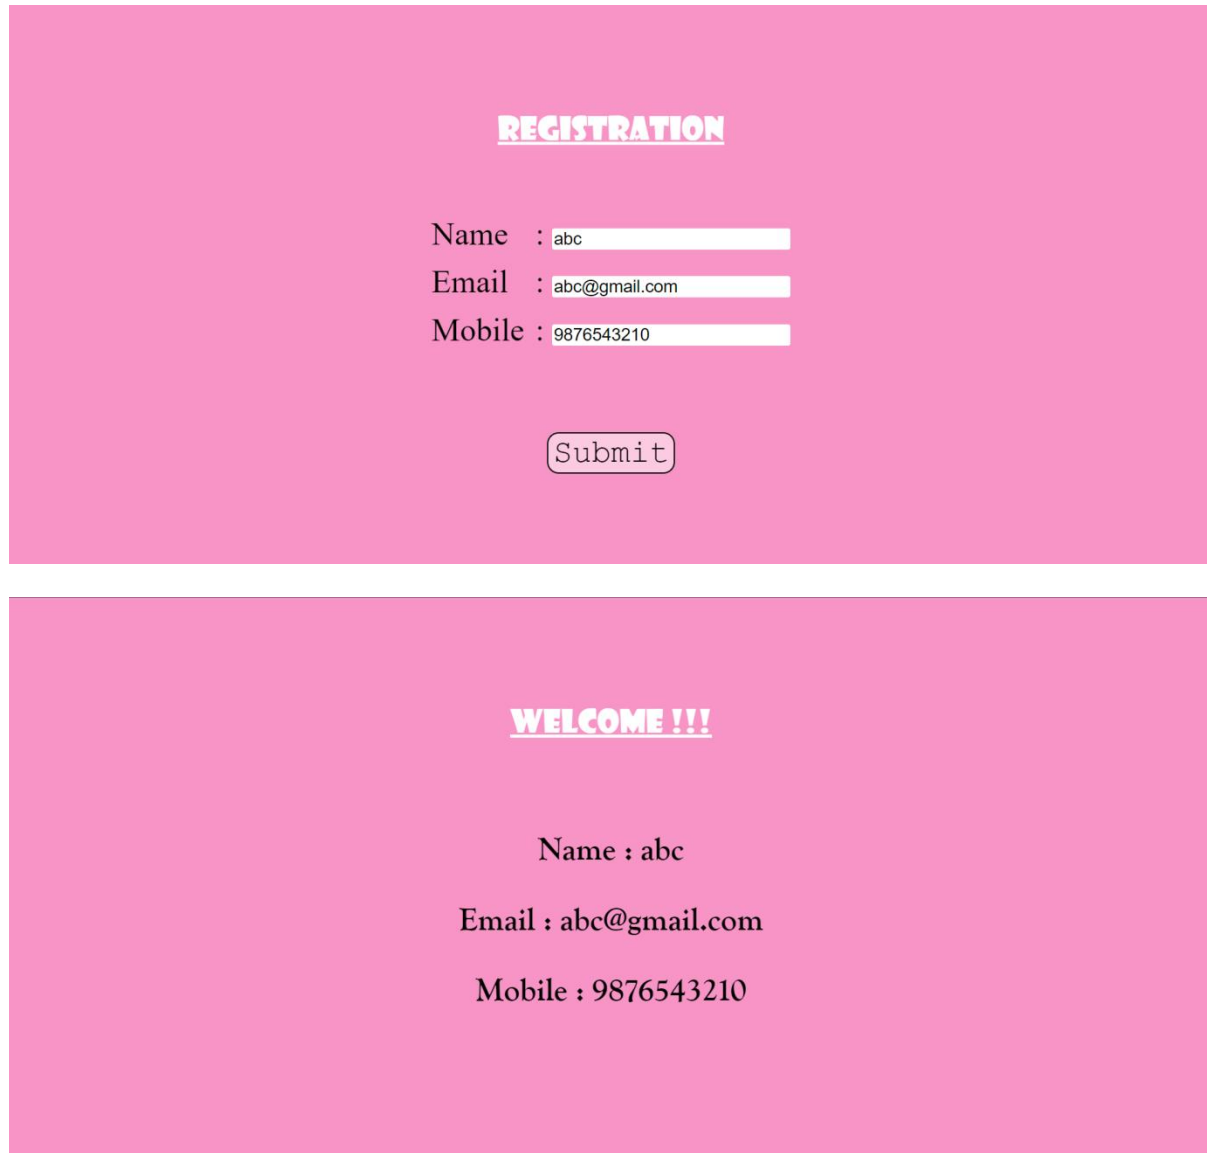

@app.route('/', methods=['GET', 'POST'])
def home():
    if request.method == 'POST':
        name = request.form["name"]
        email= request.form["email"]
        mobile = request.form["mobile"]
        return redirect(url_for('result', name=name, email=email,
mobile=mobile))
    return render_template('index.html')

@app.route("/result", methods=['GET', 'POST'])
def result():
    name = request.form.get('name')
    email= request.form.get('email')
    mobile = request.form.get('mobile')
    return render_template('result.html', name=name, email=email,
mobile=mobile)

if __name__ == "__main__":
    app.run(debug=True, port=2807)

```

**OUTPUT :**

**REGISTRATION**

Name :

Email :

Mobile :

**WELCOME !!!**

Name : abc

Email : abc@gmail.com

Mobile : 9876543210

**Question-2:**

Develop a Flask program which should contain at least 5 packages used from pypi.org

## #1. NUMPY

```
import numpy as np

arr = np.array([[ -1,  2,  0,  4],
                [ 4, -0.5, 6,  0],
                [ 2.6, 0, 7, 8],
                [ 3, -7, 4, 2.0]])

print("Initial Array: ")
print(arr)
```

```
Initial Array:
[[-1.  2.  0.  4. ]
 [ 4. -0.5 6.  0. ]
 [ 2.6  0.  7.  8. ]
 [ 3. -7.  4.  2. ]]
```

## #2. PANDAS

```
import pandas as pd

s1 = pd.Series([1, 3, 4, 5, 6, 2, 9])

s2 = pd.Series([1.1, 3.5, 4.7, 5.8, 2.9, 9.3])

s3 = pd.Series(['a', 'b', 'c', 'd', 'e'])

Data = {'first':s1, 'second':s2, 'third':s3}

df = pd.read_csv('/content/sample_data/ds_salaries.csv')
print(df)
```

```
